Brief Description Of Services Offered

Gentiva Home Health Care provides professional, skilled nursing care, physical therapy, occupational therapy, and/or speech therapy, while teaching our patients how to live more independently in the place they call home. Our services can help patients rehabilitate from medical events like stroke, surgery, and joint replacement. Gentiva can also help patients manage chronic conditions such as diabetes, heart disease, chronic lung disease, arthritis, and offer home infusion. Gentiva nurses and therapists coordinate with physicians to deliver a clear picture of your loved one's progress and respond to any sudden health changes. If your loved one is covered under Medicare A benefits, these home healthcare services may be available at no cost. Home Healthcare is about compassion, caring and helping seniors live more independently with a higher quality of life
